

## Cedrus deodara 'Pendula'

<b>Height</b>	up to 5 m
<b>Width</b>	5-8m
<b>Crown</b>	broad weeping, dark, dense crown, capricious growing
<b>Bark and branches</b>	first grey and smooth, later becoming rough
<b>Leaf</b>	bundles, evergreen
<b>Flowers</b>	unremarkable, fragrant flowers
<b>Fruits</b>	reddish brown cones, 8 - 12 cm, 1 to 2 together
<b>Spines/thorns</b>	None
<b>Toxicity</b>	usually not toxic to people, (large) pets and livestock
<b>Soil type</b>	nutrient-rich, well-permeable, acidic soils
<b>Paving</b>	tolerates no paving
<b>Winter hardiness zone</b>	7b (-14,9 to -12,3 °C)
<b>Wind resistance</b>	moderate
<b>Application</b>	industrial areas, small gardens
<b>Shape</b>	clearstem tree, specimen conifer
<b>Origin</b>	Germany, approx. 1850

Broad, weeping cultivar with branches hanging down to the ground. If this Cedrus is not trained to grow upwards, it grows into a broad, spreading plant that is broader than it is high. If the branches are trained upwards, an irregular, broad, weeping shape develops. This makes 'Pendula' eminently suited as a solitary tree. The dark, blue-green needles grow in groups, with up to 30 bundled together. The ovoid, upright cones grow singly or in pairs and have a round top. 'Pendula' saplings are particularly sensitive to frost, requiring a sunny site sheltered from wind. Does not thrive well in high-pH soils.
