

Cryptomeria japonica 'Globosa Nana'

Height	1 - 2 m, fast growing
Width	1-2m
Crown	round/spherical, dark, dense crown
Bark and branches	flaking, reddish brown
Leaf	green/yellow, evergreen
Flowers	inconspicuous, flowers in april
Fruits	spherical cone with spiked seed scales, 1.5 - 3 cm
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates no paving
Winter hardiness zone	6a (-23,3 to -20,6 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Application	small gardens, patio gardens
Shape	clearstem tree, specimen conifer

This slow-growing cultivar forms an almost spherical large shrub to about 2 m high. 'Globosa Nana' is very regularly branched with short twigs that branch strongly at the tips, the tips of which are typically curved. The scaly needles are 5 - 8 mm long and yellow-green. In winter, the foliage turns blue-green. 'Globosa Nana' has a very regular plant form and grows fine. It is also well hardy and can therefore be widely used in gardens and parks.

The name 'Globosa Nana' was given in the Netherlands in 1923, but the plant was probably imported from Japan and had therefore been in cultivation there longer. Hardiness zone: 6a
