

Pinus mugo 'Gnom'

Height	1-4 m
Width	1-3m
Crown	broad conical, dark, dense crown, capricious growing
Bark and branches	grey, black
Leaf	green, evergreen
Flowers	light yellow, flowers in June
Fruits	brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Paving	tolerates no paving
Winter hardiness zone	3 (-40,0 to -24,5 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	tree containers, roof gardens, coastal areas, industrial areas, small gardens, patio gardens
Shape	specimen conifer

Pinus mugo 'Gnom' is a slow-growing cultivar that can eventually reach a height and diameter of 4 m after many years. It has a very dense, spherical crown shape. The dense crown shape is formed because each shoot branches annually with 3 - 5 young shoots. The stiff needles are 3.5 - 4.5 cm long and dark green. 'Gnom' is mainly used as a shrub and then very suitable for use in groups at roundabouts, embankments, along roads, in parks, in cemeteries and in (large) gardens. Is much less often applied as a tree form, but even then it can be planted in small groups or as a solitary in cemeteries, tree boxes and in parks and gardens.

Was selected from a large quantity of seedlings by H. den Ouden in Boskoop in 1927. Hardiness zone: 3
