

## Acer campestre 'Anny's Globe'

|                              |                                                                                                              |
|------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Height</b>                | 3-5 m                                                                                                        |
| <b>Width</b>                 | 2-3m                                                                                                         |
| <b>Crown</b>                 | round/spherical, dark, dense crown                                                                           |
| <b>Bark and branches</b>     | grey                                                                                                         |
| <b>Leaf</b>                  | palmately lobed with (3) 5 lobes, about 10 cm long and broad, dark green                                     |
| <b>Autumn colour</b>         | yellow                                                                                                       |
| <b>Flowers</b>               | yellowgreen, flowers in May                                                                                  |
| <b>Fruits</b>                | redgreen, inconspicuous                                                                                      |
| <b>Spines/thorns</b>         | None                                                                                                         |
| <b>Toxicity</b>              | usually not toxic to people, (large) pets and livestock                                                      |
| <b>Soil type</b>             | all                                                                                                          |
| <b>Soil moisture</b>         | suitable for dry soil                                                                                        |
| <b>Paving</b>                | tolerates partial paving                                                                                     |
| <b>Winter hardiness zone</b> | 5 (-28,8 to -23,4 °C)                                                                                        |
| <b>Wind resistance</b>       | good/very good                                                                                               |
| <b>Other resistances</b>     | resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt                                |
| <b>Fauna tree</b>            | resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt, valuable for butterflies      |
| <b>Application</b>           | narrow streets, tree containers, roof gardens, coastal areas, industrial areas, small gardens, patio gardens |
| <b>Shape</b>                 | clearstem tree                                                                                               |

Acer campestre 'Anny's Globe' is a bulbous growing cultivar, usually grafted on a tall stem. The tree grows slowly and will develop a densely branched, compact, almost spherical crown. Eventually, 'Anny's Globe' reaches a height of 3 - 5 m. Depending on the graft height, the final height may vary slightly. Has the same characteristics as the species (see A. campestre), but 'Anny's Globe' is smaller in all parts and hardly suffers from mildew or spider mites. In autumn, the leaves turn golden yellow before falling off. Because of its small crown size, this cultivar is extremely suitable for use in tree boxes, roof gardens, (small) gardens, parks and small-scale green projects. The fact that this tree tolerates dry soil and semi-paved areas and can stand in full sun increases its application possibilities. 'Anny's Globe' was selected as a seedling of 'Eco Sentry' by André van Nijnatten from Zundert in 1993. Hardiness zone: 5
