

Acer cappadocicum subsp. lobelii

Height	12 - 18 (20) m
Width	3-5m
Crown	columnar, later vase shaped, half-open crown
Bark and branches	of the species, young twigs blue pruinose
Leaf	5 lobes, 8 - 14 cm, dark green
Autumn colour	yellow
Flowers	yellow-green corymbs, 5 - 6 cm, April/May
Fruits	flat oval fruits
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	humic, tolerates hard surfaces
Paving	tolerates paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for butterflies
Application	avenues and broad streets
Shape	clearstem tree
Origin	South Italy
Synonyms	Acer lobelii

Medium-sized tree with a conspicuously slender, columnar shaped crown, turning into a more vase-like shape when maturing. The young twigs are distinctively covered by a bluish white wax coating, a characteristic feature of this cultivar. The shiny, dark green leaves have five forward pointing lobes. In autumn the leaf turns yellow. 'Lobel' is a cultivar that is not tolerant to a high pH like the other cultivars of the A. cappadocicum. 'Lobel' is, however, wind resistant and can perfectly be used in hard surfaces. This excellent cultivar is extremely suitable for narrow streets, but 'Lobel' is also very characteristic as a park tree.
