Acer triflorum

Height	10 m
Width	6-8m
Crown	round, half-open crown
Bark and branches	young twigs yellowish brown, older bark brownish grey, slightly scaling
Leaf	trifoliate, green, 3 - 7 cm
Autumn colour	orange, red, purple
Flowers	yellow, in smalls corymbs of three, April/May
Fruits	winged nutlets, 4 - 5 cm long, hairy, 4 - 5 cm
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	neutral to slightly acidic
Paving	tolerates no paving
Winter hardiness zone	6 (-23,3 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	tree containers, roof gardens, small gardens, patio gardens
Shape	clearstem tree, multi-stem treem
Origin	Northern China, Korea

Bush to large tree, rarely medium-size. Somewhat resembles A. griseum at first sight, but differs from this in (among other things) its browngrey, only slightly scaling bark. With A. griseum, the bark is reddish brown and profusely scaling. The leaves of A. triflorum are hairy and rather more blue-green on the underside. In summer they are green, but in autumn they turn a splendid orange to purplish red. The species name is derived from the fact that each flower corymb comprises only three flowers. A. triflorum should mainly be used as a solitary tree in a garden or park. It prefers a slightly acidic soil.
