

Crataegus monogyna 'Stricta'

Height	8-10 m
Width	2-4m
Crown	columnar, half-open crown
Bark and branches	flaking, brown, grey
Leaf	green
Autumn colour	yellow
Flowers	white, flowers in May, fragrant flowers
Fruits	red
Spines/thorns	Yes
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	loamy soil, sandy soil, nutrient-poor soil
Paving	tolerates paving
Winter hardiness zone	5a (-28,8 to -26,1 °C)
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for butterflies
Application	avenues and broad streets, narrow streets, small gardens
Shape	clearstem tree, multi-stem treem

Crataegus monogyna 'Stricta' forms a more or less columnar tree with branches that hang down somewhat at a later age. Height up to 10 m, breadth up to 3 m. The lobed, deeply incised leaves are dark green and turn yellow in the autumn. Flower umbels appear in May with single white and sweetly scented florets. In the autumn the unremarkable, small, dull red fruits emerge. Because of its columnar growth this tree is suitable for narrow streets and small gardens. It does not stand up to wet soil. In dry summers its leaves can suffer from burn. Winter hardiness zone: 5a
