

Height	6-9 m
Width	6-9m
Crown	wide oval to round , half-open crown, capricious growing
Bark and branches	brown, grey
Leaf	green
Flowers	white-pink, purple-red, flowers in April
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates no paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	tree containers, roof gardens
Shape	clearstem tree, multi-stem treem

'Alexandrina' is a fine cultivar of the well-known M. ×soulangeana. The tree grows distinctly upright and becomes medium-sized with a height of 6-9 m with a broad oval, later almost round crown. The tree does not flower very abundantly at a young age, but more than makes up for this later. 'Alexandrina' was named in 1831 by the French nurseryman Cels from Montrouge, now a district in Paris, France. Over the years, several clones under the name 'Alexandrina' have entered the market. In the clone grown in Europe, the flowers open in April and early May. They have the typical upright, tulip shape of M. ×soulangeana. The flowers are white, becoming darker purple-red towards the base. The tree is very suitable as a park tree or in larger gardens. Hardiness zone 6b.
