

Prunus incisa 'Fujiyama'

Height	1,5-2 m
Width	1,5-2m
Crown	round/spherical, dark, dense crown
Bark and branches	brown, grey
Leaf	green
Autumn colour	orange, red
Flowers	white, flowers in April
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Paving	tolerates no paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
Application	small gardens, patio gardens
Shape	clearstem tree, multi-stem treem

'Fujiyama' is a fairly sturdy shrub with a broadly upright, later more rounded crown to over 2 m. The leaves are ovate with a strikingly long pointed tip. The leaf margin of the fairly light green leaves is double serrated. The pure white flowers with green calyxes open in April. This makes the flowers appear even lighter in colour. At 2-2.5 cm across, they are relatively large. The flowers open from early April to mid-April, depending on the temperature.

In 1979, a pure-white flowering selection of *P. incisa* was imported from Japan by the Arboricultural Research Station in Boskoop. The plant did not appear to have a valid cultivar name. In 1990, the Research Station introduced the plant as 'Fujiyama'. Hardiness zone 6b.
