

Chamaecyparis lawsoniana

'Wisselii'

Height	20-25 m
Width	4-6m
Crown	narrow pyramidal, dark, dense crown
Bark and branches	reddisch brown
Leaf	green, blue green, evergreen
Flowers	inconspicuous, fragrant flowers
Fruits	round cones, reddish brown, 0.8 cm, in small bunches
Spines/thorns	None
Toxicity	has toxic components
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Paving	tolerates no paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	industrial areas
Shape	clearstem tree, specimen conifer

Chamaecyparis lawsoniana 'Wisselii' is a stately, pyramidal growing conifer that grows 20 - 25 m high. Like the species *C. lawsoniana*, the twigs are brown and the bark is reddish-brown. 'Wisselii' is rather coarsely branched and the ends of the twigs are always almost vertically erect, which is characteristic of this cultivar. The foliage is also coarser than in most other cultivars of *C. lawsoniana*, but the dense branching gives the tree a full appearance. The scales are a slightly glossy dark green and contribute greatly to the stately appearance of the tree. Chamaecyparis likes a well-drained, humous soil and poorly tolerates chalky soil.

This cultivar was created in 1893 at the nursery of F. van der Wissel in Epe. Hardiness zone: 6b
