

Taxus baccata 'Repandens'

Height	1-1,5 m
Width	2-3m
Crown	flatened spherical, half-open crown
Bark and branches	reddisch brown
Leaf	green, evergreen
Flowers	yellow, flowers in April
Fruits	brown-black seeds, 4/5 covered by fleshy, red case
Spines/thorns	None
Toxicity	has toxic components
Soil type	clayed soil, loamy soil, sandy soil, acid soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	tree containers, roof gardens, industrial areas, small gardens, patio gardens
Shape	specimen conifer

Taxus baccata 'Repandens' is a low, evergreen conifer that grows broadly spreading to flattened spherical. It grows 1 - 1.5 m high and significantly wider and is a dense shrub, especially in later life. The branches grow slightly wavy and are greenish brown. The old bark is brown. The slightly shiny, medium-green needles are about 2.5 cm long. 'Repandens' is a female cultivar, after inconspicuous flowering not many fruits are usually formed. The dark brown seeds are largely surrounded by fleshy red flesh. The flesh is not poisonous, but the seeds are. The needles are also poisonous. A fine plant for medium-sized to large beds, which will be completely dense after a few years and then require hardly any maintenance. Because 'Repandens' tolerates shade, it can also be used as undergrowth under standard trees. Versatile in gardens, parks, embankments, industrial areas and cemeteries. Originated in the USA in 1887. Hardiness zone: 6b
