

Acer pseudoplatanus 'Prinz Handjery'

Height	4 - 5 m, slow growing
Width	3-4m
Crown	spherical, dark, dense crown
Bark and branches	twigs olive green to grey, bark grey
Leaf	5-lobed, young leaf purplish, speckled green and yellow in summer, underside light purple, about 12 - 20 cm
Flowers	yellow-green, in pendent racemes, April
Fruits	winged nut (samara), 3 - 3.5 cm long
Spines/thorns	None
Toxicity	has toxic components
Soil type	any
Soil moisture	withstand short flood
Paving	tolerates partial paving
Winter hardiness zone	4 (-34,4 to -28,9 °C)
Wind resistance	very good, even sea wind
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for bees (honey plant)
Application	coastal areas, small gardens, patio gardens
Shape	clearstem tree
Origin	Baumschule L. Späth, Berlin, Germany, 1883

This small and slow growing tree has a spherical crown and is shows a distinct resemblance to 'Brilliantissum'. The tree can reach a height of 4 to 5 m. The leaf has 5 lobes. Young foliage is purplish, later yellow-green speckled. The underside remains light purple all summer. The leaf of this cultivar is less sensitive to scorching than that of the 'Brilliantissum'. Flowers and fruits are of the species. 'Prinz Hadjery' is applied as a small park tree and as a solitary in gardens. It does not require anything special from the soil. In addition the tree has a good wind resistance. Winter hardiness zone: 4
