Fraxinus xanthoxyloides is native to Afghanistan, Pakistan and the western Himalayas. It has a round crown and attains a height of 4 - 5 m. The thin brown-green twigs have odd-pinnately arranged dull-green leaves that consist of 5 - 9 leaflets of 4 - 6 cm. These are oval shaped, which is in contrast with the variety dumosa. The central stalks are narrowly winged. F. xanthoxyloides flowers in compact panicles that are followed by keys. Rare park tree, suitable for narrow streets. Prefers well-permeating, rich soil. Winter hardiness zone: 7b
