Sturdy shrub with a round to fan-shaped growth pattern, up to about 2.5 cm tall. Rarely grows into a small tree. The slightly glossy leaf turns from yellow-orange to dark purplish red in autumn. Blossoms around late January/mid-February with very slightly fragrant, bronze-red flowers up to 4 cm in diameter. 'Diane' was named in 1969 and introduced by Robert and Jelena de Belder of Arboretum Kalmthout in Belgium. They named the plant after their daughter. Though one of the older H. x intermedia cultivars, 'Diane' is still among the best red-blossoming Hamamelis.
