

Juglans regia 'Coenen'

| | |
|------------------------------|---|
| Height | 10-15 m, fast growing |
| Width | 8-12m |
| Crown | round/spherical, half-open crown |
| Bark and branches | grey |
| Leaf | green, feathered leaf |
| Flowers | yellowgreen, flowers in May |
| Fruits | edible fruits, brown |
| Spines/thorns | None |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | clayed soil, loamy soil, sandy soil, calcareous soil |
| Paving | tolerates no paving |
| Winter hardiness zone | 5b (-26,0 to -23,4 °C) |
| Wind resistance | good |
| Other resistances | resistant to frost (WH 1 - 6), can withstand wind |
| Application | avenues and broad streets |
| Shape | clearstem tree, clearstem fruit tree |

Juglans regia 'Coenen' is a strong, vigorous tree with a broad, loose and open crown, attaining a height of 20 - 30 m. Trunk, branches and leaves are identical to those of the species. The leaves appear early in the year, which increases the risk of damage by night frost. After the emergence of the leaves the male and female flowers appear. They appear roughly simultaneously so that pollination is possible. But for effective pollination it is recommended that another type be planted close by, e.g. J. 'Buccaneer'. Winter hardiness zone: 5b
