

## Laburnum anagyroides

<b>Height</b>	5 - 7 (9) m
<b>Width</b>	4-5m
<b>Crown</b>	narrow vase-shaped, half-open crown, capricious growing
<b>Bark and branches</b>	brownish-green, young twigs green
<b>Leaf</b>	triple leaf segments ovoid to oval, green, 10 - 16 cm
<b>Flowers</b>	long pendulous bunches, 10 - 20 (25) cm, golden yellow, April/May, fragrant flowers
<b>Fruits</b>	Pods up to 8 cm in length with black seeds
<b>Spines/thorns</b>	None
<b>Toxicity</b>	has toxic components
<b>Soil type</b>	stands up to calcareous soil
<b>Paving</b>	tolerates no paving
<b>Winter hardiness zone</b>	5b (-26,0 to -23,4 °C)
<b>Wind resistance</b>	good
<b>Other resistances</b>	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt
<b>Fauna tree</b>	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt, valuable for butterflies
<b>Application</b>	industrial areas, small gardens, patio gardens
<b>Shape</b>	clearstem tree, multi-stem tree
<b>Origin</b>	Central and Southern Europe

Shrub that grows vertically and can turn into a multi-trunked tree. Usually a conscious choice is made for several trunks when growing this bush. This is done to reinforce the effect created by the flowers. Young twigs are remarkably green. Old branches and trunk turn brownish-green. The trunk remains smooth. The dark green leaf is triple, each leaf segment being 3 - 8 cm long with a blue-green underside. There are a great many flowers in golden-yellow pendulous bunches, 10 - 20 (25) cm long, but the flowers have no scent. The seedpods, leaves and young twigs carry soft hairs. In this matter this Laburnum differs radically from other types. *L. anagyroides* is often used as grafting trunk. A better ornamental tree is *Laburnum watereri* 'Vossii', a hybrid of *L. alpinum* and *L. anagyroides*.
