

Malus domestica 'Transparante Jaune'

Height	6-8 m
Width	5-7m
Crown	broad oval, round/spherical, half open crown
Bark and branches	brown
Leaf	green
Flowers	white, pink, flowers in April
Fruits	edible fruits, pale green, yellow green
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, acid soil
Paving	tolerates no paving
Winter hardiness zone	6 (-23,3 to -17,8 °C)
Wind resistance	good, susceptible to sea wind
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	small gardens, patio gardens
Shape	clearstem tree, clearstem fruit tree, halfstem fruit tree

'Star apple' is a small to medium-sized tree with moderate growth to 6-8 m in height. The crown is semi-open and initially broadly pyramidal but later widens to almost round. Light pink flowers open around mid-April-early May. The flower buds are darker pink. The apples can be picked from mid-October until November. The apples of 'Star Apple' are medium-sized and regularly clearly flattened round in shape. The colour is a beautiful glossy red with numerous small star-shaped dots. The juicy flesh is firm and crisp and creamy white to slightly pinkish white. Characteristic of 'Star Apple' are the light red stripes in the flesh around the core. The flesh has a pleasant, distinctive raspberry-like odour. The flavour is slightly acidic. The 'Star apple' is an excellent storage apple that is excellent for cooking. It is popular with restaurants because its flesh turns red when cooked.

'Star apple' is an old variety found in the South Limburg border region with Belgium around 1830. Hardiness zone 6.
