

Malus prunifolia 'Fastigiata'

Height	5-7 m
Width	3-4m
Crown	vase-shaped, half-open crown
Bark and branches	brown, grey
Leaf	green
Flowers	white, flowers in May
Fruits	yellow, red
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, acid soil
Paving	tolerates partial paving
Winter hardiness zone	3 (-40,0 to -24,5 °C)
Wind resistance	good, susceptible to sea wind
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	narrow streets, industrial areas, small gardens, patio gardens
Shape	clearstem tree, multi-stem treem

The crown of Malus prunifolia 'Fastigiata' is columnar when young, after a few years the crown widens and eventually becomes semi-open, broadly vase-shaped to fan-shaped. The tree grows about 5-7 m tall. In April, the pinkish-white flowers open, blushing white. The flower buds are slightly reddened. The flowers are single and about 5 cm in size. They are followed by many, circa 2 cm large round ornamental apples. These are yellow with a red blush. The weight of the many fruits causes the branches to bend, which will widen the crown. M. prunifolia 'Fastigiata' flowers very abundantly, but has alternate years, so that flowering and fruiting are not equally abundant every year. The tree will grow in almost any soil, provided it is well-drained. Tolerates wind, but not sea wind.

The exact origin of 'Fastigiata' is not known, the tree first appearing in 1906 in a nursery of the USDA, the US Department of Agriculture. The tree is extremely hardy, hardiness zone 3.
