

Populus nigra 'Sannae'

Height	20-25 m
Width	10-15m
Crown	oval, half-open crown
Bark and branches	grey, smooth
Leaf	reddisch brown
Flowers	red, catkins, flowers in April
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Soil moisture	suitable for wet soil
Paving	tolerates no paving
Winter hardiness zone	4 (-34,4 to -28,9 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt, valuable for butterflies
Application	avenues and broad streets, coastal areas, industrial areas
Shape	clearstem tree

At 20-25 m tall, 'Sannae' remains slightly lower than the species *P. nigra*, which can grow to over 30 m tall. The tree has a semi-open oval crown. The smooth bark is grey. Most striking feature of 'Sannae' is its red-brown leaves. Especially in spring, this is intense in colour. Later in summer, the triangular- to diamond-shaped leaves turn dark green, while the young growth shoots always have the characteristic red colour. 'Sannae', like the species *P. nigra*, is an easy tree that grows in any sufficiently moist soil. However, the tree does prefer calcareous soils. 'Sannae' tolerates road salt and sea breezes and can be used in industrial areas. Hardiness zone 4.
