

Prunus armeniaca 'Tros Oranje'

Height	4-6 m
Width	3-5m
Crown	flatened spherical, half-open crown
Bark and branches	brown
Leaf	green
Flowers	white, pink, flowers in March-April
Fruits	edible fruits, yellow, orange
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	6a (-23,3 to -20,6 °C)
Wind resistance	fairly to good
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
Application	tree containers, small gardens, patio gardens
Shape	clearstem tree, clearstem fruit tree

'Truss Orange' is an apricot tree with a semi-open, flattened spherical crown. The tree grows 4-6 m tall. The tree flowers around mid-March to early April. The flowers are very light pink to almost white. The apricots are relatively small, making them easier to ripen in the temperate and maritime climate of north-western Europe. The fruits ripen in August and can be used both for direct consumption and for storage. The smaller fruit size makes apricots very suitable for storage. The skin is deep yellow to light orange and the flesh is firm and tastes pleasantly sweet. 'Truss Orange' is a self-pollinating variety and generally produces a lot of fruit, which also makes it popular with consumers. Cross-pollination with other trees will only enhance production. Hardiness zone 6a.
