

Pyrus communis 'Triomphe de Vienne'

Height	4-7 m
Width	3-6m
Crown	broad pyramidal, half-open crown
Bark and branches	brown
Leaf	green
Flowers	white, flowers in May
Fruits	edible fruits, green, green-brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates partial paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	good, also on the coast
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	small gardens, patio gardens
Shape	clearstem tree, feathered tree, clearstem fruit tree, halfstem fruit tree, espalier fruit tree

'Triomphe de Vienne' is a moderately strong-growing pear tree with a broad pyramidal, semi-open crown of 4-7 m in height. The stem branches grow up rather steeply, but the branching is fairly wide and the branches hang over slightly, especially during fruiting. The tree flowers with white blossoms around the beginning of May. 'Triomphe de Vienne' is not self-pollinating, which means that a tree of another pear variety should be nearby for good fruiting. Preferably, 'Beurré Hardy', 'Charneux', 'Doyenné du Comice' or 'Williams' are used for this purpose. The pears of 'Triomphe de Vienne' are large to very large, sometimes up to 500 grams each. The skin is green and bronze mottled. The white-yellow flesh is soft, juicy and pleasantly sweet to taste. The pears are ready for picking in the first half of September. It is a typical hand pear, with a short shelf life and therefore mainly suitable for direct consumption.

'Triomphe de Vienne' was selected as a chance seedling in 1864 by the French grower M. Jean Colland, Nontagnon, and was marketed 10 years later by C. Blanchet, Vienne, France. Hardiness zone 5b.
