

Salix xsepulcralis 'Chrysocoma'

Height	20(25) m
Width	15-20m
Crown	broad weeping, half-open crown, capricious growing
Bark and branches	brown, grey
Leaf	green, yellowgreen
Autumn colour	yellow
Flowers	yellow, flowers in April
Fruits	fruitless cultivar
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, peaty soil, all soil types
Soil moisture	suitable for wet soil, withstand short flood, withstand long flood
Paving	tolerates no paving
Winter hardiness zone	5a (-28,8 to -26,1 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for bees (honey plant)
Shape	clearstem tree, multi-stem treem
Synonyms	Salix alba 'Tristis'

Salix xsepulcralis 'Chrysocoma', or weeping willow, reaches a height of 20-25 metres and is notable for its broad weeping, jagged crown. The bark is brown to grey and changes as the tree ages. The leaves, initially yellow-green, turn bright yellow in autumn. Yellow flowers appear in April. This willow tolerates wet soil and can withstand flooding, but does not tolerate paving. The tree is hardy to -28.8 °C and wind resistant. As a gestation tree, it provides food for bees, making it useful for biodiversity. Suitable for both tall-stemmed and multi-stemmed forms, this weeping willow is ideal for parks and large gardens.
