

Ulmus x hollandica 'Vegeta'

Height	20-25 m
Crown	broad conical, half-open crown
Bark and branches	grey
Leaf	green
Flowers	reddish-brown, flowers in March
Fruits	inconspicuous
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Soil moisture	suitable for wet soil, withstand short flood
Paving	tolerates paving
Winter hardiness zone	5a (-28,8 to -26,1 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Application	avenues and broad streets, coastal areas, industrial areas
Shape	clearstem tree

Ulmus hollandica 'Vegeta' forms an oval, later broad pyramidal crown and has several remarkably long lateral branches that grow from low down to high up in the crown. Later they spread, even overhang. This leads to more or less wild growth requiring maintenance pruning. Height 30 - 35 m. The grey bark splits along its length. The twigs are light brown and the winter buds a remarkable reddish-brown. The light green leaves measure 8 - 15 cm. Sensitive to Dutch elm disease. Winter hardiness zone: 5a
